## *Products*

- UVEKOL® A
- UVEKOL® S

Used for over 25 years throughout the world, the UVEKOL® Glass Laminating System product line by Cytec Industries Inc. has provided the end user a cost efficient way to control laminated glass quality and supply. These high quality laminated glass products have performance properties that are being utilized in the hurricane, bomb blast, sound attenuating, safety and security markets.

UVEKOL® A was designed to provide superior sound deadening performance compared to other laminating systems. While sound attenuation is the primary benefit, the end user still has the peace of mind of having a safe laminated glass product. It passes the ANSI Z97.1 and CPSC 16 CFR 1201, Cat. I & II standards for safety glazing.

UVEKOL® S was a product designed for the safety and security glazing markets, but has successfully been used for over 10 years in hurricane resistant glazing systems and more recently, bomb blast resistant systems. It is approved in Miami-Dade County for use as an interlayer and has successfully passed in various glazing systems for the high velocity hurricane zones. It also passes the ANSI Z97.1 and CPSC 16 CFR 1201, Cat. I & II standards for safety glazing.

These systems utilize Cytec's own UV curable liquid technology to form a very clear, tough, durable plastic interlayer. They require no mixing and cure by low intensity UV light, and therefore the laminator has a user friendly, safe, and consistent process.

UVEKOL® is a registered trademark of Cytec Industries Inc., a global leader in UV curable resin technology.
